1 Spotlight

The goal of Spotlight application is to detect anomalous activity towards our data. It provides audit logs through which we can skim and manually comprehend if there was any anomalous attack on our data. Using the current version one has to identify regarding any hacking towards our data. But they are trying to inculcate ML which automatically detects any anomalous activity and notifies us. In the current version it shows audit logs of whole data and we can also keep track of audit logs of some users or some important files paths. It shows every log in comprehendable manner using good UI.

2 Cyberscan

Cyberscan runs automated scans on backup snapshots in search of cyberexposures and blindspots. These also scans provide health and recoverability of backup and removes all vulnerabilities in backups such that they doesnt get downloaded again during restoration. This prevents our data from cyber attacks by disclosing cyber exposure and blindspots before hacker finds them.

3 Datamasque

The name itself gives an idea of what this app does. It performs data masking of sensitive data seemlessly integrated with our workflow itself automatically. Data masking means it encrypts our sensitive data which makes it more safe.

4 Insight

Insight app helps us to perform text search on data. This thing helps when our data is unstructured or bulky. This search works on every file format. We can also sort the search results based on file format we desire.

5 ClamAv

Generally for scanning of viruses in our data we usually send data to antivirus which would be present outside our network-attached-storage(NAS) environment. So this transmission of data might be risky. So instead cohesity provides you ClamAV which indeed scans the files in the cohesity database itself.

6 Cohesity for Cisco SecureX

This app was made with with collaboration with Cisco SecureX. This app send scohesity ransomware alerts directly Cisco SecureX console as if they appeared over there and it performs recovery of data, alerting the management.

7 Cohesity for Palo Alto Networks Cortex XSOAR

This app was made for customers of Palo Alto Networks Cortex XSOAR. This app makes immediate responses when any anomalies in backup data indicate about a ransomware attack. Then it tries to perform ransomware attack recovery.

8 Entrust KeyControl

THis application mainly focuses key management. It has keylife cycle management and also gives us customised keys and various keys such as AWS keys which also works for multiple clouds.

9 Fortanix Data Security Manager

Fortanix and cohesity combinely provides secure features like enterprise key management with an intuitve web-based interface, audit, role-based access control and encryption. It seemlessly provides these features whether on multiple cloud or on-premises.

10 Cohesity Grafana

This app enables custom reporting database which means it would give us trend reports on the basis on queries we ask the database. Means suppose there is a bank using custom reporting database and it queries the credit amount to each customer it would give a brief on loans taken by customers.

11   Cristie BMR

CBMR solves many problems related to databases in one go. It encompasses backup encryption and compression, speedy recovery, developing replica of our machines, easy migration between servers, file by file backup.

12   Capstorm Salesforce Backup

Firstly of all as we know salesforce is used for managing customer relationships. In this app cohesity collaborates with capstorm and performs operatins like backup, analytics of data, development and testing, disaster recovery etc., It additonally performs better recovery and data protection for the salesforce data.

13   EasyScript

Easyscript helps us in creating custom scripts. It provides us with cohesity API's such we may write our customised scripts which communicate with cohesitty databases.

14   Cohesity for ServiceNow

This performs protection recovery of virtual memory used by ServiceNow. It enables multi-clustered environment for VM's of servicenow. It also performs alert management.

15   Cohesity for PagerDuty

This app is made for Pagerduty and the main is to deliver antivirus, backup restore alerts etc.,. It also notifies and provides detailed data, severity of that alert to pagerduty.

16   Cohesity for VMware Cloud Director

This app again provides backup, restore and protection functionalities to Vmware cloud services. It also adds self-service feature above existing Vmware infrastructure. It means that it ensures that data is well organised and the management can use this data to mre extent to work efficiently.

17   Cohesity for VMware vRealize Automation

Firstly this app provides self-service to coheisty data. It provides cohesity api's and fecteches required objects and workflows and integrates them to automate

typical use cases of the desired product. It prvides features like backup,restoration, multi-clients and multitenancy with isolation.

18 Log Cleaner

If any company has some data in their which it doesnt wnat to share with anyone like IP address, confidential data of their customers then it sends the log files from cohesity cluster to log cleaner in which it cleans or encrypts all these sorts of data. Even when data is shared to cohesity technical team this data would pass through log cleaner only.

19 Cohesity Connector for Varonis

This app engulfs both the likes of cohesity smartfiles and varonis data security. cohesity smartfiles provides sends file access events to varonis and then varonis audits and detects anomalous activity (if any).

20 Data-Classification

It is important to classify data properly specially when dealing with sensitive data it is important that we find and seperate them from the rest. By using this app we can classify sensitive based on some customised policies of the client.

21 Runbook

Runbook ensures to automate disaster recovery and helps you prepare disaster recovery plan with a good UI design. You can test and dev runs and test failovers (how much data would be protected when servers fail). It also has Cohesity continous data protection which gives us near to zero RPO(recovery point objective).

22 Rclone browser

Simply copies and transfers contents to and from cohesity drive.

23 Cloud Data Manager for Mainframe

In making of this app we collaborated with model9 which provides us cost effective solution for backup, recovery and on that we use cohesity platform to compress and protect this data. This reduces a lot of cost.

24   Cohesity for Terraform

This application enables managing multiple cohesity clusters and also automates common cluster operations

25   BluVault for Endpoint Data Backup

For this application we collaborated with BluVault which provides us secure and established data backup in an on-premise storage and using cohesity data platform as a target for storing backup data.

26   Agent Management

Agents might take large time for large infrastrcuture sometimes. Agent management deploys cohesity agents which are way more faster and provides functionalities like running on multiple servers.
